Progression of moving target shooting world records

Before 1947, the running target competitions were run by FITASC, which never recognized world records. As the UIT took over these competitions it also established official world records.
Until 31.12.2024 the name of these disciplines was Running target shooting.
For the general world record regulations see at the rifle and pistol section.

Individual World Records

Moving target, 50 m[1]

[1] On 22.03.1967, the technical commission of the UIT decided to officially recognize world records in Running target shooting. The first official world record was the best performance since the 1963 European Championship.
Rifles with a caliber of 5.6 mm (.22") were permitted with a maximum weight of 5.5 kg including sights (telescope) and a trigger weight of at least 500 g. Multiple chargers had to be used as single chargers. Commercially available rimfire cartridges were used as ammunition. Until the moment the target became visible, the shooter was to stand in the ready position to fire, holding his rifle with both hands, with the butt of the rifle touching the hip and clearly beneath the elbow, which hangs down normally. Only when the target appeared did the shooter aim the rifle.
Frist slow run: A shot was to be fired for every five-second appearance of the target on the 10 m wide target line. 10 (15) appearance from right to left and 10 (15) appearance from left to right. Then the same program in fast run: 2.5 s appearance.
[2] Running roebuck
[3] There are two rounds of 20 runs each with the same number of slow and fast runs within the rounds. The shooters do not know the speed before the target appears. All other regulations identically to the “normal” running target discipline.

[4] Air pressure and CO_2 rifles with a caliber of 4.5 mm and a maximum weight of 5.5 kg including telescopic sight were permitted. Any trigger, no set trigger, total length of the barrel including system 1 m. Since 01.01.1989, telescopic sights were only allowed to be a maximum of 300 mm long and have a non-variable, fourfold magnification. Commercial projectiles of any shape with a maximum caliber of 4.5 mm were used as ammunition. Until the moment the target became visible, the shooter was to stand in the ready position to fire, holding his rifle with both hands, with the butt of the rifle touching the hip and clearly beneath the elbow, which hangs down normally. Only when the target appeared did the shooter aim the rifle.
Frist slow run: A shot was to be fired for every five-second appearance of the target on the 2 m wide target line. 10 (15) appearance from right to left and 10 (15) appearance from left to right. Then the same program in fast run: 2.5 s appearance. Until 31.12.1988 the target known from the 50 m competition was used.
[5] The new target has the following dimensions: 2 target rings from 1 to 10 (target 15 cm high and 26 cm long), outer ring diameter of the 10 = 5.5 mm (inner ten 0.5 mm); Ring width from 1 to 9 = 2.5mm, overall diameter = 50.5mm.
[6] The regulations are identically to the “normal” air gun and the 50 m mixed competition resp.
[7] since 01.01.2024 officially recognized
